

I would really like to take this time to thank ISNetworld for providing such a valuable service to our company and the industry. They have saved my company and me countless hours of office time which has allowed us to spend more time focusing on the hands-on aspects of our Safety Program and less time behind the desk. Their database is very easy to use and offers a means of record keeping that is much easier to access than most of our personal files.

The SCQ-V is very valuable to us. It's very easy to use and self explanatory. I couldn't begin to list all of the features that ISNetworld offers and that have been very beneficial to my company. Being a smaller company, what has been most valuable to my company and I, is their support staff. My personal contact with ISNetworld, Delia Gutierrez, has been a life saver to me and has always been willing to answer my questions and steer me in the right direction.

The ISNetworld support staff and database are a combination that is an immeasurable asset to my company and I could not calculate the time and money they have saved my company over the last few years. I would recommend their service to any company who wants to be a step ahead of the rest and feels like their time and money would be better spent in the field instead of behind a desk.
