Marine Engineering Systems Co, Inc/MESCO  
*Solutions Underwater for over 56 years*

July 23, 2009

Stroud Diving & Hydrography has used ISNetworld as our pipeline compliance database since 2002. It has since become our central location for safety information, safe operations procedures, safety training for our employees, and our safety training catalog system.

We are constantly updating the data to make it available to our Owner Clients, and use it as our best marketing tool to demonstrate our compliance with Department Of Transportation and safety regulatory agencies. Our customers comment to us regularly about the quality, degree of accuracy, and thoroughness of the information stored on the ISNetworld system. Prior to using the ISNetworld database we were beginning to think we had become a publishing company, as all of our safety data was published in printed format and provided to customers in print or through electronic media, which was unsecured and uncontrolled. We are much happier with ISN's streamlined system, and the confidentiality we receive.

ISNetworld is easy to navigate and the menus are simple to negotiate. The Review and Verification Services process (RAVS) allows companies to have their health and safety documents stored and verified by ISNetworld's team of health and safety professionals. With the help from the RAVS Self Review component, each required company is guided through a thorough review of their safety programs. This is to insure that contracting companies continually meet or exceed OSHA's compliance standards. While this might seem cumbersome, it is an easy way to access federal standards for assistance. Within ISNetworld, all of your information is easily available to your clients who are ISNetworld subscribers.

Company statistical information on safety and quality management is found under the Management System Questionnaire (MSQ) of ISNetworld. This is the most comprehensive and up-to-date statistical data on our company, available anywhere on the web. One look at our Dashboard grade gives us the immediate feedback if our site needs attention and if sections of the MSQ need updating. Owner Clients then use this information to make informed decisions about who they employ at their facilities.

Without ISNetworld, we would be back in the publishing business and shipping volumes of documents to our customers and hoping they'd eventually land on the right desk of appropriate personnel. With our ISNetworld relationship, we can relax knowing that any one of our authorized customers and operators can view our information whenever needed, and we are back doing the productive things that we're best at.

I would be happy to entertain questions and comments about ISNetworld, or to help someone learn more about getting involved.
